

Intellectual Property and Operating Model

A clear view of the Platform, specialist portfolio and operators

PUBLIC INFORMATION SERIES / 49G-PUB-03

Intellectual Property and Operating Model

EDITION English	CONTENT REVIEWED 1 October 2026	PUBLISHER 49G HOLDING LTD
---------------------------	---	-------------------------------------

SECTION 01

A portfolio built around BitLease Platform

BitLease Platform is the core product and technology system at the centre of 49G. 49G Holding Ltd owns its core intellectual property and the IP in three specialist entries: 49AION, HyperHedge and Partner Program.

Named Group companies operate each product or capability. This connects a coherent portfolio with clear responsibility for every entry.

SECTION 02

Portfolio at a glance

Product or capability	Intellectual property owner	Operator
BitLease Platform	49G HOLDING LTD - core Platform IP	BITLEASE TECHNOLOGY LTD
49AION	49G HOLDING LTD	BITLEASE INC.
HyperHedge	49G HOLDING LTD	BITLEASE CAPITAL LTD
Partner Program	49G HOLDING LTD	BITLEASE INC.

SECTION 03

BitLease Platform

The Platform brings together the core software, architecture, designs, models, specifications and documentation assigned to Holding. It provides the common product focus around which the Group's operating structure is organised.

BITLEASE TECHNOLOGY LTD is the current Platform operator and the current holder of the Core Platform Company role. CoreCo identifies the company carrying the central operating responsibility. The role, the company and the intellectual property remain separately visible.

SECTION 04

Three specialist entries

49 AION 49AION

49AION is a distinct entry in Holding's intellectual-property portfolio. 49G HOLDING LTD owns its IP and BITLEASE INC. is its named operator.

HyperHedge

HyperHedge is a specialist capability alongside BitLease Platform. 49G HOLDING LTD owns its IP and BITLEASE CAPITAL LTD is its named operator.

Partner Program

Partner Program includes an identifiable software-engine estate, with code, architecture, data models, interfaces, configuration frameworks and documentation. 49G HOLDING LTD owns the program IP and BITLEASE INC. is its named operator.

SECTION 05

Four relationships, read separately

The operating model becomes clear when four relationships are considered in their own right:

01 Company ownership identifies the parent and subsidiary chain.	02 Intellectual-property ownership identifies the company that holds the rights in an asset.
03 Operating responsibility identifies the company assigned to a product or capability.	04 Contracting responsibility belongs to the legal entity named as the party to the agreement.

A product name or architectural role does not replace the company behind it. The legal entity remains the actor that decides, contracts and assumes responsibility in its own name.

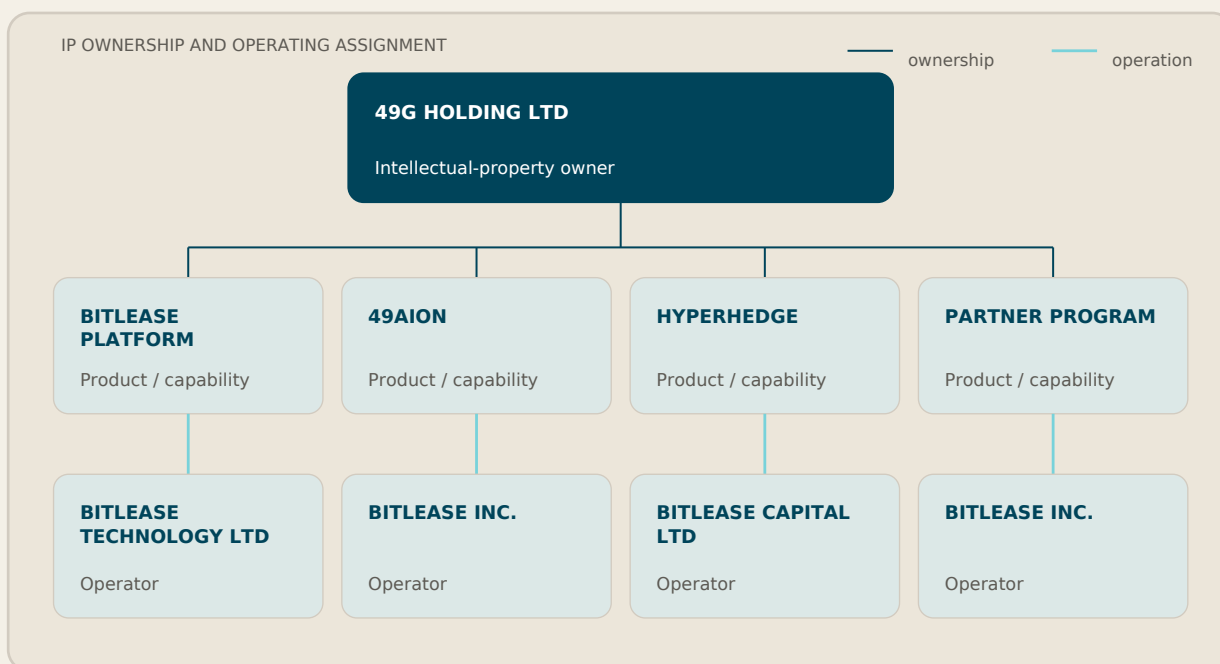

SECTION 06

One core role

The CoreCo role gives the Platform one central operating company at a time. BITLEASE TECHNOLOGY LTD currently holds that role. Because CoreCo is a role rather than a second product or company, the structure can adapt while preserving a clear record of who holds responsibility at any point.

SECTION 07

An ownership model designed for clarity

Holding brings the core Platform IP, specialist IP and BitLease brand rights into a single ownership centre. The named companies then carry their respective product and capability roles through their own governance.

For readers, the model answers the essential questions directly: what the asset is, who owns it and which company is responsible for operating it. That clarity is central to the Group's institutional architecture.
